

Peace Corps Quarterly HIV Programming Report

FY25Q1 *(mock)*

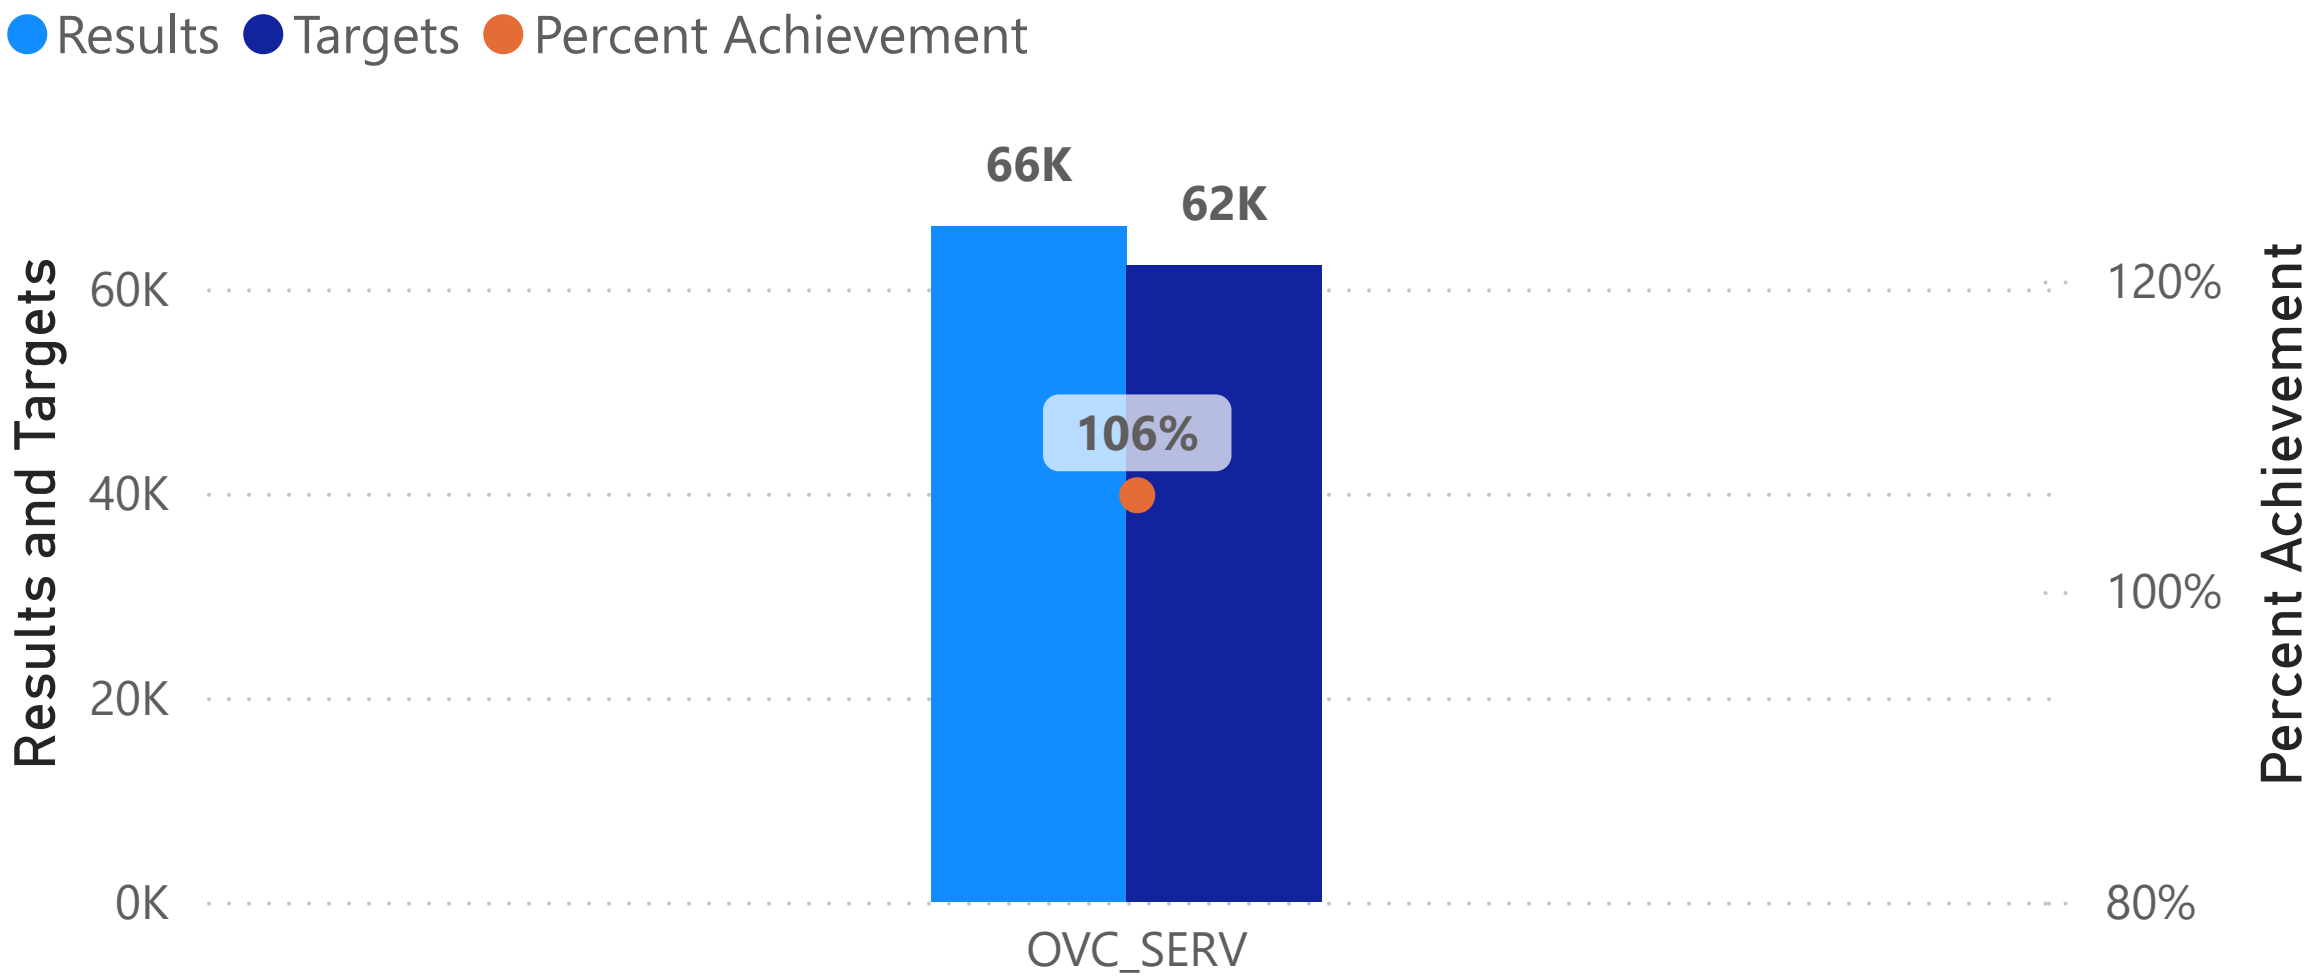

- Peace Corps custom data as of: 1/31/25
- OVC MER data as of: 2/13/25

Peace Corps Indicators FY25

Indicator Description	Reached	Target	% Achievement
1. # priority populations reached with standardized HIV-prevention intervention(s) that are evidence-based	79,635	61,944	129%
2. # individuals who complete an evidence-based intervention integrating societal norms	28,164	43,142	65%
3. # individuals trained to reduce stigma and discrimination toward PLHIV	7,954	2,978	267%
4. # of referrals to HIV services	150,750	7,803	1932%
5. # of linkages to HIV services	5,590	2,943	190%
Total	272,093	118,810	229%

*referrals/linkages are for HIV testing, treatment, ART adherence & retention counselling, VMMC, PrEP and ANC
*referrals/linkages are not 1-1, in some cases, individuals will be linked to care by PCVs, after getting referred outside PC

MER OVC_SERV Prevention Results (Semi Annual only)

Peace Corps HIV Programming Success Stories and Narratives

- Country A implemented pilot of Host Country Volunteer(HoCoVo) program, evaluation to be conducted soon. Under this model, Peace Corps staff and volunteers train host country government volunteers to implement HIV prevention activities such as Grassroot Soccer (GRS) and other activities.
- Country B currently evaluating their HIV prevention models to maximize efficacy and understand lessons learned for expanding programs to more regions
- HIV_140 (formerly MER PP_PREV) sees increase in reported populations reached than in 2023 and 2022.
- # of referrals far exceeds targets. Country Z makes up most of the numbers reported for this indicator. Follow up to understand higher than expected numbers will be conducted with their team.
